The Mid-Market manufacturing landscape is one of the most challenging in industry today. Competition is fierce, supplier consolidation initiatives are real, design cycles are speeding up, and product development is changing.

In this environment of disruption and changing consumer preferences, the companies that most successfully deploy best-in-class tools and expertise stand to reap a long-lasting competitive advantage.

So, how do YOU differentiate yourself from your competitors?

You can come out on top by improving your time to market, increasing your efficiency to drive down costs and with an ability to handle more product change and complexity than the competition.

Use complexity to your advantage. The best way to do that is to set up a **digital twin** (a digital representation) of your product so that you can make decisions fast and with confidence. That's where the real value is.

Given the stakes, it's no stretch to say that advanced design software + proven deployment services is the surest path to success. Take out that services expertise and the path suddenly gets that much longer and more uncertain, precisely at the moment when falling behind will be more costly than ever.

Our **Software + Services** combination helps shift more of the high value engineering work forward in the design cycle, a trend apparent across all emerging methodologies. Our customers trust us to advance their use of technology to gain a competitive advantage.

We have one of the finest and most experienced teams of professionals in the industry. Our approach to services is to guide our customers in deploying solutions based on proven industry standards that allow for optimizing the overall system performance, efficiency and cost, and doing so as early as possible in the design cycle. The value of early-stage harness design and optimization has never been higher.

Oasis Sales is now the 1st and only Siemens Digital Industries Software Smart Partner for Electrical Systems & Wire Harness Design and Manufacturing in the Americas.

As a result, every day we put our industry knowledge and expertise to work for one specific purpose: to help our customers achieve greater success.

Also, we truly understand the reluctance when it comes to changing processes or implementing software, but our experienced team of application engineers make the process simple, understandable, and repeatable so you can operate on your own faster. As new processes come up and the software needs to adjust, we will be there to help you in making those modifications.

Our implementation training offerings are aligned with your specific operations such as:

- Schematics or Harness Drawings
- Harness Drawings, Costing and Production Documentation

And include industry standard:

- Library component creation or modification
- Production flow & costing pattern creation or modification
- Production floor documentation creation or modification
- Best practices defined to be reused over and over
- Education of the new design team, validating Capital tools and processes, extending user documentation and providing dedicated online or on-site support.

At Oasis Sales, we provide real **Software + Services** for your electrical design and manufacturing requirements that have long been relegated to just the large corporations. Let us bring that big corporate solution to you now, at an economic cost and help take you to the next level.

Oasis Sales truly stands out in this landscape not only for the breadth of our offerings but also for our decades-long track record with companies just like yours! Let us put our experience, drive and expertise to work for you!
